Gulsum Dinc graduated from the Akdeniz University School of Medicine in Turkey in 1994. In 2005, she completed her specialization in Clinical Biochemistry at the Goztepe Teaching and Research Hospital in Turkey. Following her specialization, she received her medical degree as an aesthetic physician in 2005. She has been performing non-surgical facelifts since 2006 and since 2014 has been using the Fotona SP Dynamis for pigmentations, benign lesions and capillary vessel removal.

Frequency (Hz)	1.6	0.3	5	5	7	2	1

Treatment procedure:

A 55-year-old female patient came to the office with xanthelasmata under her eyes. Our initial treatment plan was to use 4D laser while also targeting pigmentations and capillary vessels within the same treatment.

Following the 4D laser treatment, we removed the pigmentations and xanthelasmata until bleeding occurred. We used Nd:YAG with the above-mentioned parameters for telangiectasia. Following the treatment, we recommended the use of 2% fusidic acid topical cream, Fito cream, moisturizer, and 50 SPF, as well as to clean her face with saline solution and a sponge during the day 2-10 post treatment period. Following the procedure, the patient was monitored weekly and, as can be seen from the follow up picture taken after 2 weeks, the xanthelasmata were almost completely cleared and pigmentation in the cheeks was removed.

Before and after the treatment
